SUMMARY

Builder at the intersection of AI, blockchain, and client-facing engineering. Spent the last few years helping teams ship real products on Solana and pioneered the AI capital markets narrative at SOON SVM, laying groundwork for consumer-grade AI financial apps on programmable blockchains. Comfortable working directly with clients, moving fast, and turning messy problems into things that actually work.

EXPERIENCE

DevRel Lead and AI Ecosystem Architect

Sep. 2024 – May 2026

SOON SVM (Solana Optimistic Network)

Remote

- Worked directly with 50+ ecosystem projects and helped them ship to mainnet, contributing to 60M+ transactions and \$300M+ in volume
- Kicked off the AI capital markets initiative at SOON, building the foundation for consumer-grade AI financial tooling on decoupled SVM infrastructure
- Helped projects like simpforfun and 10xSoon grow to hundreds of millions in trading volume through hands-on technical and ecosystem support
- Wrote 25+ technical articles on decoupled SVM, merklization, and zkSVM and grew the community through hackathons, Twitter Spaces, and Discord

Developer Relations Engineer

Aug. 2023 – Aug. 2024

Fetech

Remote

- Built a Circle-powered cross-chain bridge and middleware layer for token swaps across EVM and non-EVM chains
- Developed Pay.Wallet, a consumer crypto payments app, and added Squid Router and DeBridge support to the aggregator backend
- Shipped a TypeScript SDK for Plex with integrations across GitHub, Spotify, Telegram, and Discord

Software Engineer

Jan. 2022 – Aug. 2023

iCeipts

Pune, India

- Built a scan and pay mobile app, ride-booking app with Google Maps API, and an employee management platform for a large European salon chain covering attendance, leaves, and salary processing
- Developed a supply chain ERP solution letting teams digitally manage their entire operations end to end

PROJECTS

ClearSign | Solana, TypeScript, MCP, AI Agents | app.clearsign.fun

May 2026 – Present

- Built a policy-gated signing and intent verification layer for Solana treasuries and AI agents, live on mainnet
- MCP server lets AI agents execute onchain transactions with human-readable verification, policy controls, and anomaly detection
- TypeScript SDK and CLI with Jupiter Aggregator swap support and multisig coordination using SHA-256 hashing and 30-min TTL

Joule Finance | Aptos, Axelar, Move | LRT Bridge and Money Market

Jun. 2024 – Nov. 2025

- Built onchain programs for LRT bridge and money market including lending, borrowing, and cross-chain LST support via Axelar
- Hit 100k transactions in the first week of testnet and surpassed 50k users in the money market

ACHIEVEMENTS AND RECOGNITION

Solana Fellow: Selected for the Solana Foundation fellowship, worked on CLI tooling and SPL token libraries

25+ Hackathon Wins: Won across Solana, Ethereum, Aptos, and AI x crypto tracks globally

Speaker at 30+ Events: ETH KL, DogeCon, Bangkok Innovators Hub, and more

Superteam Member: Writing content, building projects, and creating docs for new Solana developers

TECHNICAL SKILLS

Languages: TypeScript, Python, Rust, Go, Solidity

AI and Agents: MCP (Model Context Protocol), LangChain, OpenAI API, Agentic Workflows, RAG, Vector Databases

Frameworks: Next.js, React Native, Node.js, Django, Flask, Tailwind

Blockchain: Solana, Ethereum, Aptos, Sui, Cosmos, Axelar, Wormhole, Jupiter, DeBridge

Tools and Infra: Anchor, Foundry, Hardhat, REST/GraphQL APIs, ETL Pipelines, Postgres, Redis, AWS
