SUMMARY

Builder focused on AI systems, developer tools, and financial infrastructure. Over the last few years I've helped teams ship production products across AI and crypto while building products that make complex technology feel simple.

EXPERIENCE

DevRel Lead and AI Ecosystem Architect

Sep. 2024 – May 2026

SOON SVM (Solana Optimistic Network)

Remote

- Helped **50+ ecosystem projects** ship production applications on decoupled SVM infrastructure, contributing to over **60M+ transactions** and **\$300M+ in ecosystem volume**; led the ICM initiative focused on institutional-grade financial infrastructure.
- Published **25+ technical articles** on decoupled SVM architecture while growing the developer ecosystem through hackathons, workshops, Twitter Spaces, and Discord office hours.

Developer Relations Engineer

Aug. 2023 – Aug. 2024

Fetccch

Remote

- Built cross-chain payment infrastructure using Circle, Squid Router, and deBridge across **6+ EVM and non-EVM networks**.
- Developed Pay.Wallet, a consumer payments application, and expanded backend infrastructure for cross-chain swaps.
- Built the Plex TypeScript SDK with integrations for GitHub, Spotify, Telegram, and Discord.

Software Engineer

Jan. 2022 – Aug. 2023

iCeipts

Remote

- Built a scan and pay mobile app, ride-booking app with Google Maps API, an employee management platform for a large European salon chain, and a supply chain ERP solution for digital operations management

PROJECTS

ClearSign | Solana, TypeScript, MCP, AI Agents | app.clearsign.fun

May 2026 – Present

- Built an intent verification and policy engine enabling AI agents to safely execute Solana transactions on mainnet.
- Developed an MCP server providing human-readable transaction verification, policy enforcement, and anomaly detection.
- Built a TypeScript SDK and CLI supporting Jupiter swaps, multisig coordination, and expiring signed intents.

Joule Finance | Aptos, Axelar, Move | LRT Bridge and Money Market

Jun. 2024 – Nov. 2025

- Built onchain programs for LRT bridge and money market including lending, borrowing, and cross-chain LST support via Axelar
- Hit 100k transactions in the first week of testnet and surpassed 50k users in the money market

ACHIEVEMENTS AND RECOGNITION

Solana Fellow: Selected for the Solana Foundation fellowship, worked on CLI tooling and SPL token libraries

25+ Hackathon Wins: Won across Solana, Ethereum, Aptos, and AI x crypto tracks globally

Speaker at 30+ Events: ETH KL, DogeCon, Bangkok Innovators Hub, and more

Superteam Member: Writing content, building projects, and creating docs for new Solana developers

TECHNICAL SKILLS

Languages: TypeScript, Python, Rust, Go, Solidity

AI: MCP, OpenAI API, Anthropic API, LangChain, Agentic Workflows, RAG, Vector Databases

Frameworks: Next.js, React Native, Node.js, Django, Flask, Tailwind

Blockchain: Solana, Ethereum, Aptos, Sui, Cosmos, Axelar, Wormhole, Jupiter, DeBridge

Tools and Infra: Anchor, Foundry, Hardhat, REST/GraphQL APIs, ETL Pipelines, Postgres, Redis, AWS
