SUMMARY

Builder at the intersection of AI, crypto and engineering. Spent the last few years helping teams ship real products on Solana and led the ICM (internet capital markets) initiative at SOON SVM, laying the groundwork for institutional-grade financial apps. Comfortable working directly with clients, moving fast, and turning messy problems into things that actually work.

EXPERIENCE

DevRel Lead and AI Ecosystem Architect

Sep. 2024 – May 2026

SOON SVM (Solana Optimistic Network)

Remote

- Worked directly with **50+ ecosystem projects** and helped them ship to mainnet, contributing to **60M+ transactions** and **\$300M+ in volume**; led the ICM initiative building the foundation for institutional-grade financial tooling on decoupled SVM infrastructure
- Grew projects like simpforfun and 10xSoon to **hundreds of millions** in trading volume through hands-on technical and ecosystem support
- Wrote **25+ technical articles** on decoupled SVM, merklization, and zkSVM and grew the community through hackathons, Twitter Spaces, and Discord

Developer Relations Engineer

Aug. 2023 – Aug. 2024

Fetcc

Remote

- Built a Circle-powered cross-chain bridge and middleware layer for token swaps across **6+ EVM and non-EVM chains**
- Developed Pay.Wallet, a consumer crypto payments app, and extended aggregator backend with Squid Router and DeBridge
- Shipped a TypeScript SDK for Plex with integrations across GitHub, Spotify, Telegram, and Discord

Software Engineer

Jan. 2022 – Aug. 2023

iCeipts

Remote

- Built a scan and pay mobile app, ride-booking app with Google Maps API, an employee management platform for a large European salon chain, and a supply chain ERP solution for digital operations management

PROJECTS

ClearSign | Solana, TypeScript, MCP, AI Agents | app.clearsign.fun

May 2026 – Present

- Built a policy-gated signing and intent verification layer for Solana treasuries and AI agents, live on mainnet
- MCP server lets AI agents execute onchain transactions with human-readable verification, policy controls, and anomaly detection
- TypeScript SDK and CLI with Jupiter Aggregator swap support and multisig coordination using SHA-256 hashing and 30-min TTL

Joule Finance | Aptos, Axelar, Move | LRT Bridge and Money Market

Jun. 2024 – Nov. 2025

- Built onchain programs for LRT bridge and money market including lending, borrowing, and cross-chain LST support via Axelar
- Hit 100k transactions in the first week of testnet and surpassed 50k users in the money market

ACHIEVEMENTS AND RECOGNITION

Solana Fellow: Selected for the Solana Foundation fellowship, worked on CLI tooling and SPL token libraries

25+ Hackathon Wins: Won across Solana, Ethereum, Aptos, and AI x crypto tracks globally

Speaker at 30+ Events: ETH KL, DogeCon, Bangkok Innovators Hub, and more

Superteam Member: Writing content, building projects, and creating docs for new Solana developers

TECHNICAL SKILLS

Languages: TypeScript, Python, Rust, Go, Solidity

AI and Agents: MCP (Model Context Protocol), LangChain, OpenAI API, Agentic Workflows, RAG, Vector Databases

Frameworks: Next.js, React Native, Node.js, Django, Flask, Tailwind

Blockchain: Solana, Ethereum, Aptos, Sui, Cosmos, Axelar, Wormhole, Jupiter, DeBridge

Tools and Infra: Anchor, Foundry, Hardhat, REST/GraphQL APIs, ETL Pipelines, Postgres, Redis, AWS
