EXPERIENCE

DevRel Lead

Sep. 2024 – Present

SOON (Solana Optimistic Network)

Remote

- Guided 50+ ecosystem projects from development to mainnet deployment
- Authored 25+ technical articles on decoupled SVM, merklization, and zkSVM rollup architecture
- Built developer community through hackathons, Twitter Spaces, and Discord office hours
- Developed SDKs and documentation enabling 60M+ transactions and \$300M+ in volume

Developer Relations Engineer

Aug. 2023 – Aug. 2024

Fetccch

Remote

- Engineered a Circle-powered cross-chain bridge for frictionless token swaps
- Developed the Pay.Wallet application for next-generation crypto users
- Enhanced cross-chain aggregator backend, adding support for Squid router and DeBridge
- Created backend and SDK for Plex, including third-party integrations (GitHub, Spotify, Telegram, Discord)

Software Engineer

Jan. 2022 – Aug. 2023

iCeipts

Pune, India

- Developed end-to-end solution for a scan and pay app
- Implemented algorithm for a dating application for an Africa-based client
- Developed a ride-booking mobile app using Google Maps API
- Improved backend architecture for fleet and waste management systems

PROJECTS

ClearSign.fun | Solana

May 2026 – Present

- Developed a human-readable, hash-locked signing layer for Solana wallets and AI agents that eliminates blind signing by surfacing decoded token movements, amounts, and recipients
- Built Chrome Extension, CLI, and TypeScript SDK with native support for transfers, Jupiter Aggregator swaps, and multisig coordination (2-of-3 approvals)
- Implemented SHA-256 proposal hashing, 30-minute TTL expiry, policy gates, and anomaly detection to prevent wallet drainers and ensure tamper-proof intent verification

Joule Finance | Aptos, Axelar

June 2024 – Nov. 2025

- Developed programs for the LRT bridge and money market, including lending and borrowing
- Achieved 100k transactions within one week of testnet launch; surpassed 50k users in money market
- Used Axelar to support different EVM LSTs for LRT bridging

ACHIEVEMENTS

Developed Onlyblinks, blinks registry on solana containing more than 300 different kinds of blinks.
Winner of 25+ global hackathons, showcasing expertise in blockchain and decentralized technologies.
Speaker at 20+ events, covering blockchain topics, Solana, and development best practices.

HONORS AND AWARDS

Fellow @ Solana: Selected for the Solana fellowship and worked on various projects including CLI tools and SPL token libraries.

Member @ Superteam: Assisted fellow members by writing content, creating projects, and making documentation for new developers entering the Solana ecosystem.

TECHNICAL SKILLS

Languages: TypeScript, Solidity, Python, Rust, Go

Frameworks: React Native, Next.js, Django, Flask, Tailwind

Blockchain: Solana, Ethereum, Aptos, Sui, Polygon, Cosmos, Axelar, Wormhole

Tools: Moralis, Hardhat, Foundry, Truffle, Ganache, Anchor
